COMPANY HISTORY

The company was start incorporated in year 2010 as a Software developer and consulting company, but the founder already started the strategy and software development since 2001 to accommodate the needs of the telecommunication industry during his profession as Telco consultant.

The software was evolved from an installed version (desktop version) during year 2001-2005, proprietary company software (Microsoft Access and MapInfo) in the year 2007 to 2008, and now as a web-based version that running over the internet architecture.

Through our belief in continuous improvement and investment in this industry, we have grown from strength to strength in our endeavour to achieve this goal by keeping updating our software to the highest performance and interactive level among similar product in the market.

The previous version is in use by one of the prominent operators in the Middle East, where it has helped the operator to improve their performance by 81% on most of their main Key Performance Index.

Most advanced and latest version has been bought by one of the leading operators in Malaysia to support their large organization, especially monitoring team to observe and react on their network performance including GSM, UMTS and LTE.

We also have been awarded with manage service to manage one of the operator's network from Single Site Verification, Network optimization and Network operation control (NOC) where we provide 24/7 monitoring by our operation team.

In recent development, our company has entered to new phase where we have produced numbers of tools varies from desktop, mobile apps and Cloud services. Furthermore, we have introduced latest product which is cloud drive test platform i.e. Cellnet-Teamwork.com.

We also involve with RF related activities, new sites, Drive Test for government project, and our team have strong background with end to end of Radio Network Design & Planning.

OUR VALUES

The company outstanding values benefit from our in depth understanding of the mobile network challenge and requirement of today network environment scenario. These value gains from diverse insight knowledge of mobile network system technologies, supplier advancement in product design, mobile services, customers demand and challenge.

Through years of service, this special niche has evolved into our brand name on every solution the company has to offer. The culture of the company is based on high sensitivity of customer satisfaction. The company maintains internal firewalls and separation between its various customers.

OUR MISSION

To be the leading software development company in providing customized IT solutions and Consultancy, with range of products and services in telecommunication and multimedia locally as well as globally.

OUR VISION

To work and serve at the highest level of accomplishment to serve the core needs of every world's leading mobile network operator, vendors and engineering services company in enhancing their values and returns.

PRINCIPAL BUSINESS ACTIVITY

Our company strength in building software for telecommunication industry with very specific scope has made our objective to enter the market with a niche product based on a strong knowledge in this industry successfully executed. The sale of customizable software for network performance monitoring tool (CellNet) to major operator in Malaysia had brought us to more opportunities in the Telco business, especially the activity surrounds the network improvement such as consultancy services, optimization and data collection activity such as drive test analysis.

The engagement with operator after sale also allow us to tap into their other businesses where as a software developer, we will be able to identify the area that need some automation or system to be developed for improvement in operator's daily operational activity. Hence, support and consultancy can be introduced during the software development to ensure the requirement from operator will be achieved.

PRODUCT AND SERVICES

We have developed a product to be sold as a solution to Telecommunication Company for network performance monitoring function. This tool will come with customization package that let the customer decide on the functionality that blend with their company working culture.

We also provide a wide range of support services for our system to clients, along with other generic hardware support inclusively provided by servers' manufacturer.

1

Support Maintenance

Our proposed support services (for software systems) will be provided 24x7 for a period of one (1) year from the date of user acceptance test (UAT) sign.

2

Dedicated Support Engineer

We will provide a dedicated on-site system engineer to our customer from the date of UAT sign-off to monitor the system on a daily basis as well as for immediate response to any related support calls.

3

Network Design and Optimization

Network planning stage (Site survey, site acceptance report and drive test analysis) where we will provide a team to support operator or vendor to do any planning related and optimization activity. Value added to our service that we also offer to our client with our project monitoring software that allow teams and our client to work effectively by monitor each activity as well as any shared document will be available through the web with a highly secured system for fast action from our counterpart.

4

Project Management

In the short period, we have hired more people to extend the operation team become stronger in order to make the production more efficient. Our strong team consists of group of consultants with vast experiences and outstanding achievement in years of services throughout the world. We've been servicing the world's leading mobile network operators, vendors and consulting companies with profound track records and satisfaction.

Now and beyond, we will focus on businesses that will extend beyond APAC and generally across the globe. However, in the near future, we aim to operate in the local and regional markets of Asia. In other words, we are currently focusing on leading all local telecommunications markets as well as within the APAC region.

Telecommunication is expected to improve day by the day to provide the needs of tomorrow. AdvancedCellNet has the expertise in telecommunication development software. Our great knowledge of the industry enables us to provide the most accurate and up-to-date information possible with competitive prices and be well situated in both local and international markets.

1

Supported by very experience team members on designated field i.e. Telco (Radio Frequency, software engineering and consultancy).

2

Oversea working experience from team members open up opportunities to expand beyond Malaysia boundary.

3

We develop application for enterprise that we already have very good knowledge and experience about their business.

4

GIS as part of the core in our system, thus it can widen to another segment of business that depending on GIS technology such as transportation, national security and plantation.

5

Our product also more competitive as we design it over web application which very minimum license needed and most of it is open sources, hence the cost would not pass to our client.

6

Software platform on Cloud technology become one of our niche products which called cellnet-teamwork.com. One of its kind that available over the cloud networking and access able from anywhere.

ORGANIZATION CHART

BROCHURE: CELLNET 3.0

CellNet Platform is the “Big Data” application for cellular network utilizing web based architecture with most intuitive and advanced approaches to present the network performance through enterprise cloud network.

CellNet Platform lets companies leverage their existing database from all vendors infrastructure, while accommodating Customizable features driven by operator's needs, thus simplification of requirement by engineer level up to management easily can be presented and precise.

HIGHLIGHT

Dashboard

Capability to show relevant information into one single workspace such dashboard, and still valuable information presented in manageable manner. Our team will work closely with Operator to customize the UI for desired KPIs group and other information.

Messaging

Sharing information among co-workers will simplify the troubleshooting, annotation and historical state of the network performance. CellNet grants user to communicate among user similar with email system with better security and controllable environment.

Reporting

Some operator facing Ad Hoc request of report from their top management, therefore creating report with customization on fly will be much anticipated. CellNet permits user to customize the report according to their own formula for generating KPI report.

Panoramic Photo

In order to have better knowledge of their network, most operator desire complete understanding on their network, one of them is site panoramic view. CellNet allows user to store site survey photo for their future reference and network planning department will appreciate even more.

GIS

Advance features to support visualization of the Network performance on Map, user customization on polygon with user defined formula. Drilldown function from map up to cell level is the among unique technique in this imminent technology.

Drill Down

The fastest methodology to get straight to the cause of sudden degradation is by drill the issue down to exact point of problem. CellNet provides such capability to give more personalize analysis to engineer where user can customize with their preferable formula.

HIGHLIGHT

Drive Test

Web-based drive test tool for wireless network testing from various vendors and all major network technologies, including latest technologies.

Drive Test Grid

Drive Test Grid platform where detail of measurement or event is display on version grid.

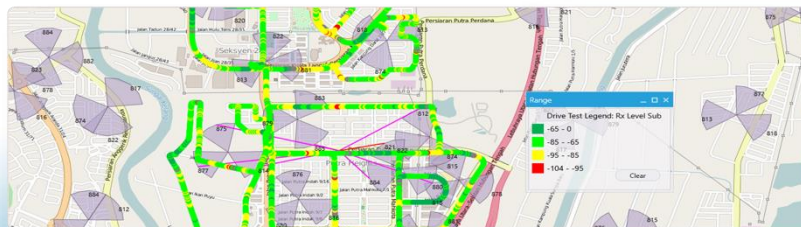

Drive Test Chart

Drive Test Chart is sub of Drive Test. User can visualize chart and graph from Drive Test

Survey Drone

Platform user can view survey report and video take by drone based on location provided. User able to play video and download the report from Survey Drone.

Cloud Drive Test Analysis

Access Authorization Level

Capable to manage numbers of different level of authorization with a very well organized structure

Support Custom KPI on Fly

Modifiable KPIs by user which query is designed based on standard SQL command. Varies technique of SQL command is able to produce required output.

Asynchronous Coding Technique

Capability to show relevant information into one single workspace such dashboard

Multi-Vendor Support

CellNet designed with great Technique of data exploration, adding new vendor is manageable

Adaptable data collection

Able to adapt new data whenever data collection flow ready and any new requirement transformed through ETL processes to produce desired results.

Performance Analysis

Monitoring network performance relatively easy and smooth using a set of analysis tool available in CellNet.

Administrative Access

Manage user account to access the tool

Notification Center

Log stored in this collection center from any activity Done by user thus allow admin to trace and Help user with better query or to correct Any query's issue. Admin or user can correct it by themselves from KPI window.

Panoramic Photo

Photo will be saved in the cloud to allow user access anytime and everywhere. Implementation of authorization will ensure photo uploaded is under permission.

Informational Reporting

Well-ordered report by providing dashboard, formula windows, quality dashboard and report.

Communication Tool

Easily for user to communicate and sharing information among team or inter-department and region

Systematic Mapping

Mapping-enable user for searching cell location, map it with cell performance that allow customizable KPI and built on top of advance mapping layer

Drive Test

Well analyzed performance Technology including measurement data and event log

Survey Drone

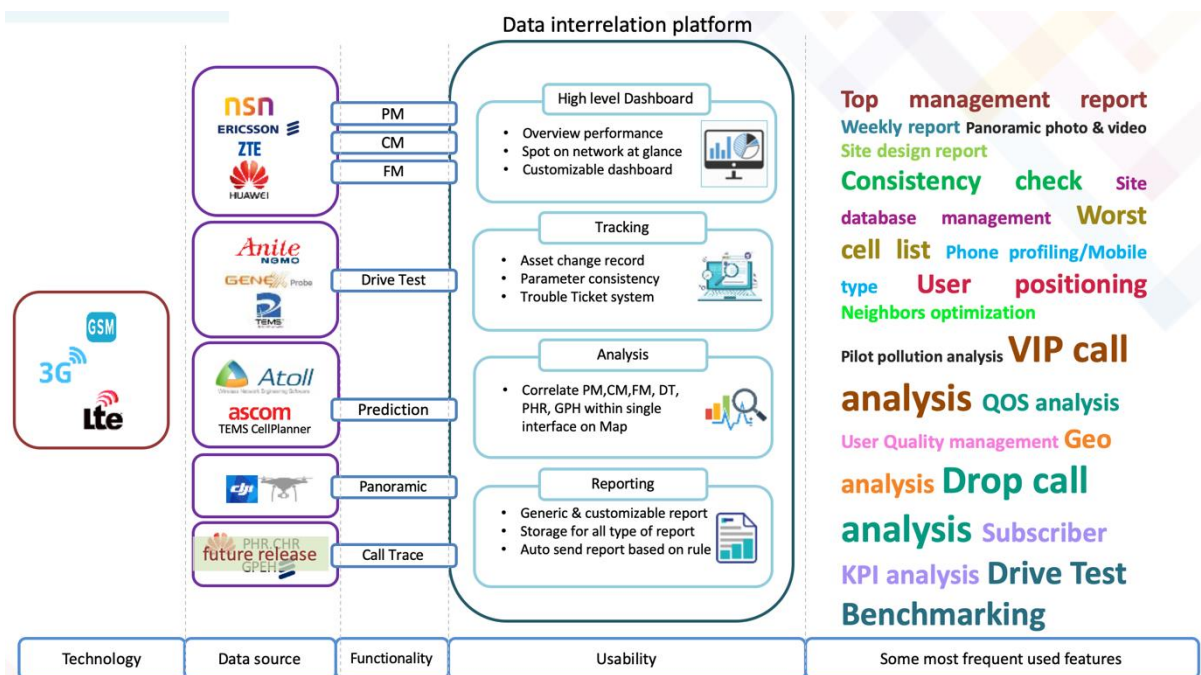

Well-ordered report and video that able to play and download from survey drone based on specific location

Drive Test Chart

Result Drive Test can be view in Chart and Graph.

Drive Test Grid

Result of Measurement or Event will display on Grid version which result longitude and latitude location
